

Summit Freight: \$38k recovered in year one by matching invoices before payment

Logistics · Truckload + LTL · Go-live September 2026 (illustrative)

The Challenge

Summit Freight processed ~900 carrier invoices a month with two AP clerks. Discrepancies were found weeks late — often after the carrier's dispute window — and the team was losing an estimated 1-2% of freight spend to overcharges and unauthorized accessorials. POD chasing alone ate 10 hours a week.

The Solution

We deployed the freight AP suite: automatic parsing of every invoice, matching against the TMS ledger and contracted rates, evidence-backed dispute packages submitted within 24 hours, and automatic POD chasing. The matcher ran in shadow mode for a week, then went live with auto-hold.

Results

Overcharges caught (year 1)	\$38,000
Dispute filing time	6 weeks → 24 hours
Invoices matched automatically	100%
Back-office hours saved	~30 / month
Auto-resolution rate	62%

“The matcher pays for itself every month. Our AP team finally works on strategy, not stacks of paper.”
