

Stratum AI — Executive Summary

One platform, three verticals, one promise: the boring 80% of operations runs itself.

The thesis

SMBs in medical/dental, real estate and logistics run on repetitive workflows — calls, scheduling, paperwork, follow-up, disputes. They can't afford full-time automation teams, but they can afford an outcome-priced AI platform that plugs into the tools they already use. That's us.

The product

A multi-vertical AI agent platform: shared agent infrastructure (LLM routing, tools, memory, API layer, deployment) with vertical-specific agent suites — clinic front-desk automation, brokerage lead pipelines, and freight AP/exception automation. Every client gets their own isolated instance: config, encrypted secrets, customizations and metrics.

The business model

Vertical	Implementation	Monthly platform	Gross margin
Medical/Dental	\$3.5k – \$7k	\$750 – \$1,800	45-70%
Real Estate	\$4k – \$8k	\$1,000 – \$2,500	50-70%
Logistics/Freight	\$8k – \$15k	\$2,000 – \$4,500	55-65%

Why now

LLM unit economics now support always-on agents for SMBs: 70-80% of traffic runs on cheap fast models, giving us 55-70% gross margins while clients see ROI in month one. The market has SaaS tools but almost no one ships full operational agents per vertical with real integrations (Dentrix, MLS, TMW, QuickBooks...).

Go-to-market

Outbound + proof-of-value: free mini-audits on the client's real data (missed calls, stale leads, historical invoices) close at ~3x the rate of demos. Vertical case studies, ROI calculator, and 15-minute live demos carry the pipeline.

Milestones (12 months)

Q1	3 pilot clients (1 per vertical), playbooks locked
Q2	10 paying clients, first vertical hits 65%+ margin
Q3	Standardized onboarding < 14 days, 25 clients
Q4	50 clients, \$60k+ MRR, expansion revenue > 15%

Ask: \$X seed to fund integrations, first hires (1 eng, 1 sales) and 3 pilot deployments.
